Professor Benton,

I have definitely enjoyed my time in your class. I can't count the times I stayed up way later than I should, trying to make random programs work. I also send lot of my time at my internship, in visual basic. Doing internship work as well of course. I am planning to do 340 with you next semester, and I just declared a computer science minor. Since high school I have been designing and developing websites. I have designed over ten live websites and teach web design at a tech camp in the summer. Next year I am looking to integrate my strengths in programming with my talent in web design into what will hopefully become my final project. I have connections with HP and IBM already, so I think I'm bound to stare at a computer screen for the rest of my life. This is what I want to do with my life and I have had a great time learning everything you had to offer this semester. This is by far the best ISAT class I have been in. I have watched myself excel in your class and I'm terribly impatient to see what ISAT 340 holds. I'm not sure there is much more to say other than that. My portfolio indentifies what I have learned in your class. The only thing that I struggled to succeed with this semester was attendance, and I apologize. I think other than that I have taken advantage of this class to the fullest. Thanks for everything you gave us this semester (including my A grade, which other than attendance, I believe I earned).

Have a good summer,
Adam Maas
